Contents Volume 46–47 (1993)

Preliminary pages
Preface
Symposium organization

Fundamentals

Turbulence modellings and their applications
On the simulation of turbulent flow past bluff bodies*
W. Rodi (Karlsruhe, Germany) 3
Comparison of various turbulence models applied to a bluff body*
S. Murakami (Tokyo, Japan) 21
Computational modelling of complex turbulent flow – expectations, reality and prospects*
M.A. Leschziner (Manchester, UK) 37
Modeling flows around bluff bodies by Reynolds averaged transport equations*
D. Laurence (Chatou, France) 53
Subgrid-scale modeling suggested by a two-scale DIA*
A. Yoshizawa (Tokyo, Japan) 69
Estimation of anisotropic k–ε model on the backward-facing step flow by LES Data Base
T. Kobayashi (Tokyo, Japan), Y. Morinishi (Nagoya, Japan) and S. Togashi (Tokyo, Japan) 77
Numerical prediction of separating and reattaching flows with a modified low-Reynolds-number k–ε model
K. Abe, Y. Nagano and T. Kondoh (Aichi-ken, Japan) 85
Influence of the turbulence model in calculations of flow over obstacles with second-moment closures
A.O. Demuren (Norfolk, VA, USA) 95
Finite-volume computation of merging parallel channel flows by a second-moment turbulence closure model
S. Obi and S. Masuda (Yokohama, Japan) 105
Numerical analysis of wind around building using high-speed GSMAC–FEM–Validation of differential stress model
S. Kawamoto, S. Kawabata (Chiba, Japan) and T. Tanahashi (Yokohama, Japan) .. 115
A computational study of the flow in a bluff body/flat plate junction
J.G. Bain and C.A.J. Fletcher (Sydney, Australia) 121
Numerical simulation to determine the effects of incident wind shear and turbulence level on the flow around a building
Y.Q. Zhang, A.H. Huber, S.P.S. Arya and W.H. Snyder (Raleigh, NC, USA) 129
Numerical study of wind flow over an elevated roadway
D.J. Bergstrom and K.M. Boucher (Saskatoon, Canada) 135
Appropriate boundary conditions for computational wind engineering models using the k–ε turbulence model
P.J. Richards (Auckland, New Zealand) and R.P. Hoxey (Bedford UK) 145

0167-6105/93/$06.00 © 1993 Elsevier Science Publishers B.V. All rights reserved.

Transport equations of conditionally averaged Reynolds stresses for computation of turbulent flows with intermittency
A. Nakayama (Kobe, Japan) and G. Fabris (Pasadena, CA, USA) 155
Optimization of roughness parameters for staggered arrayed cubic blocks using experimental data
T. Maruyama (Kyoto, Japan) 165
Modelling of turbulent flows within plant/urban canopies
H. Hiraoka (Kyoto, Japan) 173
Discussions of turbulence modellings and their applications
W. Rodi 183

Direct and large eddy simulations
Simulation of complex turbulent flows: Recent advances and prospects in wind engineering*
J.H. Ferziger (Stanford, CA, USA) 195
Large-eddy-simulation of the flow around building models
W. Frank (Karlsruhe, Germany) and H. Mauch (Baden, Switzerland) 213
Computation of wind flow around a tall building and the large-scale vortex structure
C.C.S. Song and J. He (Minneapolis, MN, USA) 219
Large eddy simulation of microburst winds flowing around a building
M. Nicholls, R. Pielke and R. Meroney (Fort Collins, CO, USA) 229
Use of large eddy simulation to measure fluctuating pressure fields around buildings with wall openings
K. Hibi, H. Ueda, T. Wakahara and K. Shimada (Tokyo, Japan) 239
Numerical modelling of flow over a rigid wavy surface by LES
Z. Liu (Madison, WI, USA), A Kareem and D. Yu (Notre Dome, IN, USA) 245
A numerical study on the flow around flat plates at low Reynolds numbers
R. Nakayama, Y. Nakamura, Y. Ohya and S. Ozono (Fukuoka, Japan) 255
Fourth order finite difference and multigrid methods for modeling instabilities in 2-dimensional flat plate boundary layers
Z. Liu and C. Liu (Denver, CO, USA) 265
Numerical analysis of flows over walls with protuberances
N.Y. Abdel-Shafi and N. Nishikawa (Chiba, Japan) 275
A numerical study of nonlinear waves excited by an obstacle in the flow of stratified fluid
H. Hanazaki (Ibaraki, Japan) 283
Discussions of direct and large eddy simulations
J.H. Ferziger 289

Numerical methods
Finite element methods in wind engineering*
T.J.R. Hughes and K. Jansen (Stanford, CA, USA) 297
High resolution vortex simulation of bluff body flows*
A. Leonard and P. Koumoutsakos (Pasadena, CA, USA) 315
Volume-fraction techniques: Powerful tools for wind engineering*
C.W. Hirt (Los Almos, NM, USA) 327
Numerical simulation of high Reynolds number flows by Petrov–Galerkin finite element method
K. Kakuda and N. Tosaka (Chiba, Japan) 339
Direct third-order upwind finite element simulation of high Reynolds number flows around a circular cylinder
N. Kondo (Chiba, Japan) 349
Automatic mesh generation for FEM simulation of wind flow around tall buildings
K. Uemura and T. Saito (Yokohama, Japan) 357

Numerical simulation of flow around a sphere with vortex blobs
Y. Nakanishi and K. Kamemoto (Yokohama, Japan) 363
Simulation of turbulent flow by discrete vortex approximation
K. Kushioka, T. Saito, A. Honda (Nagasaki, Japan) and T. Inamuro (Yokohama, Japan) 371
Solution method of the time transient moving boundary problems using generalized porous media technique – FAVORITE (FAVOR ImitaTE) program
H. Tsukiyama (Chiba, Japan), Y. Tajima, M. Yao (Tokyo, Japan) and H. Arai (Chiba, Japan) 381
Application of massive parallel computer to computational wind engineering
S. Kato, S. Murakami (Tokyo, Japan), Y. Utsumi (Miyagi, Japan) and K. Mizutani (Tokyo, Japan) 393
Discussions of numerical methods
T.J.R. Hughes et al. 401

Applications

Wind load

The generalization and simplification of wind loads and implications for computational methods*
A.G. Davenport (London, Ont., Canada) 409
Numerical simulation of wind-induced pressures on buildings of various geometries*
T. Stathopoulos and Y.S. Zhou (Montreal, Que., Canada) 419
Predicting R.M.S. pressures from computed velocities and mean pressures
D.A. Paterson (North Ryde, NSW, Australia) 431
A comparison of computer and wind-tunnel models of turbulence around the Silsoe structures building
P.J. Richards and B.S. Wanigaratne (Auckland, New Zealand) 439
Computational and experimental roof corner pressures on the Texas Tech building
R.P. Selvam and P.B. Konduru (Fayetteville, AR, USA) 449
Numerical simulation of flowfield around Texas Tech building by large eddy simulation
A. Mochida, S. Murakami, M. Shoji and Y. Ishida (Tokyo, Japan) 455
Large eddy simulation of wind flow around dome structures by the finite element method
T. Ogawa, T. Suzuki and Y. Fukuoka (Tokyo, Japan) 461
Computation of wind flow over topography
D.A. Paterson (North Ryde, NSW, Australia) and J.D. Holmes (Highett, Vic., Australia) 471
Analysis of hyperbolic cooling towers for wind loads with ACMC and semi-loof shell elements
Karisiddappa, P. Krishna, P.N. Godbole and M.N. Viladkar (Roorkee, India) 477
Computing the statistical stability of integral length scale measurements by autoregressive simulation
P. Schrader (Bochum, Germany) 487
Response analyses on along-wind and across-wind vibrations of tall buildings in time domain
H. Tsukagoshi (Osaka, Japan), Y. Tamura, A. Sasaki (Kanagawa, Japan) and H. Kanai (Tokyo, Japan) 497

Proposed formulae for the power spectral densities of fluctuating lift and torque on rectangular 3-D cylinders
H. Choi (Seoul, Korea) and J. Kanda (Tokyo, Japan) 507
Numerical simulation of pressure distributions underneath roofing paver systems
Y. Sun and B. Bienkiewicz (Fort Collins, CO, USA) 517
Discussions of wind load
A.G. Davenport 527

Wind induced vibrations
Numerical study on aeroelastic instability of cylinders with a circular and rectangular cross-section
A. Okajima and K. Kitajima (Ishikawa, Japan) 541
Unsteady pressure field around oscillating prism predicted by LES
S. Sakamoto (Yokohama, Japan), S. Murakami, S. Kato and A. Mochida (Tokyo, Japan) 551
Numerical investigation on the aeroelastic instability of bluff cylinders
T. Tamura (Tokyo, Japan), Y. Itoh, A Wada and K. Kawahara (Kanagawa, Japan) 557
Numerical simulation of flow field around an oscillating bridge using finite difference method
A. Fujiwara, H. Kataoka and M. Ito (Tokyo, Japan) 567
A numerical investigation of the unsteady fluid force induced in the annular diffuser by the oscillating inner cylinder
H. Izumi, Y. Kawata (Hyogo, Japan), N. Taniguchi and T. Kobayashi (Tokyo, Japan) 577
Finite element analysis of vortex-induced vibrations of bluff cylinders
T. Nomura (Tokyo, Japan) 587
Interaction analysis between structure and fluid flow for wind engineering
M. Shimura and A. Sekine (Tokyo, Japan) 595
Vortex induced vibration of circular cylinder
H. Kawai (Saitama, Japan) 605
Simulations of aerodynamic instability of bluff body
T. Inamuro, T. Adachi and H. Sakata (Yokohama, Japan) 611
Aerodynamic loading and flow past bluff bodies using discrete vortex method
B. Bienkiewicz (Fort Collins, CO, USA) and R.F. Kutz (Kansas City, MO, USA) 619
Unsteady aerodynamic force characteristics on 2-D oscillating bluff body
H. Shirato, M. Matsumoto and N. Shiraishi (Kyoto, Japan) 629
Aeolian vibrations of overhead transmission lines: Computation in turbulence conditions
G. Diana, F. Cheli, F. Fossati (Milano, Italy) and A. Manenti (Brescia, Italy) 639
Discussions of wind induced vibrations
S. Sakamoto et al. 649

Environmental problems
Numerical study of wind flow over a cooling tower
D.J. Bergstrom, D. Derksen and K.S. Rezkallah (Saskatoon, Sask., Canada) 657

A study on the environment in an open court of high rise building with heliport
M. Higuchi, N. Takahashi and M. Yao (Tokyo, Japan) 665
Modelling of flow and ventilation within petroleum process plants
A. Ronold (Høvik, Norway) 675
Simulation of diffusion phenomena under unstable conditions using a Lagrangian particle dispersion model
Y. Ichikawa and K. Sada (Tokyo, Japan) 681
Numerical and experimental simulation of vehicle exhaust gas dispersion for complex urban roadways and their surroundings
Y. Moriguchi and K. Uehara (Ibaraki, Japan) 689
Simulation of air flow over a heated flat plate using anisotropic k–ε model
K. Sada and Y. Ichikawa (Tokyo, Japan) 697
Application of Reynolds-stress model to the study of heat island structure over a slightly inclined terrain
G. Huang, Y. Kawahara and N. Tamai (Tokyo, Japan) 705
Modeling of multisized particle laden turbulent low swirling free jets
J.L.T. Azevedo and J.C.F. Pereira (Lisbon, Portugal) 713
Simulation of wind-driven-rain around a building
E.C.C. Choi (Nanyang, Singapore) 721
A three-step Taylor–Galerkin finite element method for orographic rainfall
K. Kashiyama, K. Kaneko, C.B. Jiang and T. Yamada (Tokyo, Japan) 731
Three dimensional numerical simulation of snowdrift
T. Sato, T. Uematsu, T. Nakata and Y. Kaneda (Sapporo, Japan) 741
Discussions of environmental problems
D.J. Bergstrom et al. 747

Pedestrain wind

Numerical and experimental modelling of the three-dimensional turbulent wind flow through an urban square
A. Gadilhe (Nantes, France) L. Janvier (Chatou, France) and G. Barnaud (Nantes, France) 755
Numerical simulation of flowfield around buildings in an urban area
S. Takakura, Y. Suyama and M. Aoyama (Ibaraki, Japan) 765
Numerical study on relationship between building shape and ground-level wind velocity
S. Yamamura and Y. Kondo (Tokyo, Japan) 773
Discussions of pedestrian wind
A. Gadilhe et al. 779

Vehicle aerodynamics and others

Numerical analysis and visualization of flow in automobile aerodynamics development
R. Himeno and K. Fujitani (Yokosuka, Japan) 785
Flow structure around a 3D bluff body in ground proximity: A computational study
S. Parameswaran, I. Kiris, R. Sun and M. Gleason (Colorado, USA) 791
Finite element analysis of air flow around an automatic guided vehicle
H. Kanayama, K. Toshigami, Y, Tashiro (Kanagawa, Japan), M. Tabata and S. Fujima (Tokyo, Japan) 801
Unsteady aerodynamics and wake of the savonius wind turbine: A numerical study
V.J. Modi (Vancouver, BC, Canada) and M.S.U.K. Fernando (Melbourne, Australia) 811
Discussions of vehicle aerodynamics and others
S. Parameswaran et al. 817

Computer aided experiments and computer graphics
Turbulence measurement in a separated and reattaching flow over a backward-facing step with the aid of three-dimensional particle tracking velocimetry
N. Kasagi, A. Matsunaga and S. Kawara (Tokyo, Japan) 821
Study on three-dimensional characteristics of natural ventilation in half-enclosed buildings using video imaging techniques
M. Ohba (Kanagawa, Japan) 831
A computer-controlled wind tunnel
A. Nishi, H. Miyagi (Miyazaki, Japan) and K. Higuchi (Hyogo, Japan) 837
Computer animation for incompressible viscous flow problems by using graphic engineering work station
H. Sato, K. Kakuda and N. Tosaka (Chiba, Japan) 847
VVG & Leonardo as interactive visualization systems for computer fluid mechanics
V.D. Goryachev, V.N. Saenko and V.U. Sigov (Tver, CIS) 853
Discussions of computer aided experiments and computer graphics
N. Kasagi et al. 857

Workshop
Workshop Report of the workshop "Prospect for numerical analysis of interaction between fluid flow and structural vibration"
R. Decker (Utah, USA) and J. Kanda (Tokyo, Japan) 863

Appendix (Abstract)
For the advance of the computational structural aeroelasticity
T. Ohkuma (Yokohama, Japan) 869
Survey for the aeroelasticity of structures
M. Matsumoto (Kyoto, Japan) and Y. Tamura (Kanagawa, Japan) 873
A computational fluid dynamicist's view of CWE
J.H. Ferziger (Stanford, CA, USA) 879
Numerical analysis of the flow around vibrating cylinders
A. Okajima (Kanazawa, Japan) 881
Numerical simulations of aerodynamic instability of bluff body by the discrete vortex method
T. Inamuro (Yokohama, Japan) 885
Current research by the FDM
T. Tamura (Tokyo, Japan) 893
Current researches by FEM
T. Nomura (Tokyo, Japan) 897
A contribution to the workshop on computational wind engineering
A.G. Davenport (London, Ont., Canada) 899

Summary of Video Presentation
Video Representation Report 905
